

## fold-over crimp technique

Fold-over crimps can be used with thicker cords like satin.

1. Put a dab of super glue on the cord and slide it into the fold-over crimp. Let the glue dry for a minute.

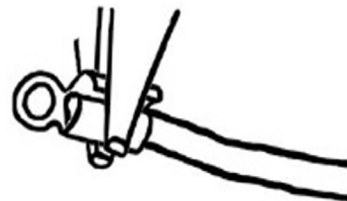

2. Use chain-nose pliers to firmly fold one side of the crimp down onto the cord.

3. The foldover crimp should now be secure on the cord.

4. Use chain-nose pliers to fold the second side of the crimp over the first.

5. Attach a clasp with a jump ring or split ring. Use the same method for the other end of the cord.
